

ABSTRACT OF THE DISCLOSURE

When it is detected that a CRC check is acceptable  
in Blind Transport Format Detection(BTFD) processing,  
the BTFD processing is halted from this moment onward,  
5 the number of bits of voice code of each class is  
decided based upon the bit rate of each class in a bit-  
rate combination that prevails when the CRC check is  
acceptable, the voice code of each class is  
demultiplexed from receive data based upon the number  
10 of bits and the demultiplexed voice code is input to a  
voice codec.
